

**SPECIFICATION**  
 PROCESS DESIGN AND INTERNALS  
 2 STAGE SUCTION SCRUBBER – ITEM V-101 A/B/C/D  
 FASAM Quotation: P1743IR Item 2.0

|                   |   |  |
|-------------------|---|--|
| Application       | : | Separation of liquid and solids from natural gas |
| Sketch            | : | 1743.001.2.0                                     |
| Max flow          | : | 301385 kg/h (100%)                               |
| Min flow          | : | 120554 kg/h (40%)                                |
| Type of separator | : | MC 120-20/CFG-5A-S1-GYIE1-S                      |

|                       |   |                          |
|-----------------------|---|--------------------------|
| Continuous phase      | : | Natural gas              |
| Density               | : | 50,228 kg/m <sup>3</sup> |
| Viscosity             | : | 0,01 cP                  |
| Operating pressure    | : | 61 bar g                 |
| Operating temperature | : | 46° C                    |

|                      |   |                         |
|----------------------|---|-------------------------|
| Discontinuous phases | : | Liquid and solids       |
| Density liquid       | : | ~658 kg/m <sup>3</sup>  |
| Viscosity liquid     | : | 0,28 cP                 |
| Amount of liquid     | : | 15 kg/h                 |
| Density solids       | : | ~1500 kg/m <sup>3</sup> |
| Amount of solids     | : | ~5 kg/h                 |
| 1.-stage             | : | 120 multi cyclones Ø 2" |
| 2.-stage             | : | 20 coalescer cartridges |
| Type                 | : | CFG-5A-9,1-GYIE1-S      |
| Dimensions           | : | 152 x 915 mm long       |
| Flow                 | : | in to out               |

|                                 |   |                             |
|---------------------------------|---|-----------------------------|
| Differential pressure m.c.      | : | > 5 psi                     |
| Differential pressure coalescer | : | 0,09 bar @ wet condition    |
| Total differential pressure     | : | > 7 psi                     |
| Efficiency:                     |   |                             |
| 5 micron liquids droplets       | : | > 99 % at min. and max flow |
| 5 micron solid particles        | : | > 99 % at min. and max flow |

7 psi = 0.48 bar ≈ 0.5 bar  
 0.17 bar.

## FILTRATION · SEPARATION · PURIFICATION

|  |                      |
|--|----------------------|
| Design pressure:                               | 99 barg              |
| Design temperature:                            | +85 °C               |
| Cyclones, pipe risers & Tube-sheets materials: | SS316-L              |
| Corrosion allowance:                           | 3,2 mm               |
| Vessel internal diameter:                      | 1000 mm              |
| TL-TL  | 4500 mm.             |
| Inlet/Outlet:                                  | 20", 800#            |
| Design code:                                   | ASME SEC VIII Div. 1 |

### NOTES:

- 1- Shell & Head materials are Nace A-516 Gr.70
- 2- All nozzles > 2 inch are Self reinforced Nace A-105 #
- 3- Assumed differential pressure to calculate thk of tube-sheet is based on 10 psi at first stage and 20 psi at second stage to protect supports due to increasing pressure drop in coalescers from deformation.
- 4- To protect Cyclones due to abrasion from abnormal solid particles, Plasma Nitriding will be done.
- 5- To protect Coalescers in second stage from liquid (HLL = 300 mm), the length of filter carry pipes are 400 mm.
